

# Using the 9000E Series Machine

---

The 9000e series is the latest version of our successful widget making machine. It incorporates all the very latest technologies which we have developed. There are significant improvements in usability and safety over the 8000K series.

## Starting the machine

1. Be sure you are wearing your hearing protection headset.
2. To turn the machine on, push the green button marked "On".
3. Wait for the sound to reach full volume and the green "Ready" light to switch on.
4. When the wheels are turning at full speed, engage the blue handle.

## Creating widgets

1. Feed the blank panels into the slot. Do not let your hands get too close to the slot as it is dangerous.
2. When the finished widget come out the other end, wait until it is fully out and then grab it and drop it in the completed widget pile.

## Packing widgets

1. Widgets must be packed carefully as they are delicate and can break easily.
2. Lay the packaging foam between individual widgets and cut the extra off with the blade provided. Remember be careful with the blade.
3. Place the stack of widgets in the plastic lined box and seal it with the acrylic sealer.
4. Do not breathe too heavily because the sealant smells bad, and don't rub your eyes with sealer.

## Turning the machine off

1. Push the blue handle off.
2. Push the red button marked with 'Off'.
3. Wait for the sound of the machine to stop.
4. Check everything is okay.
